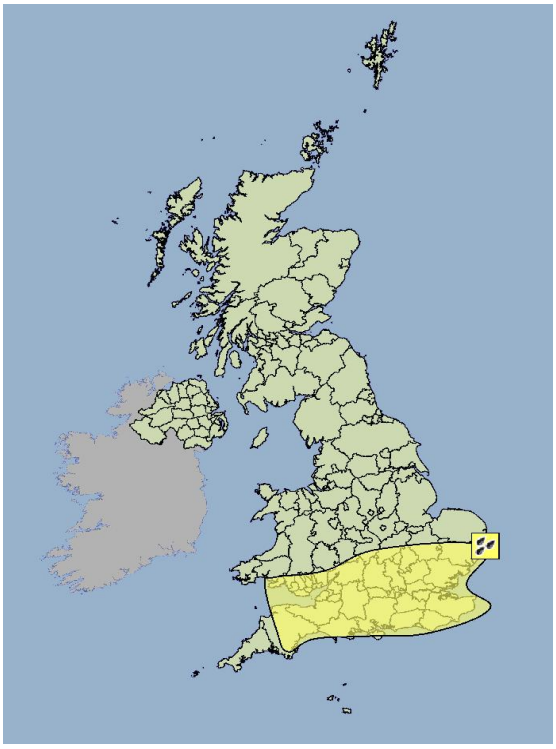
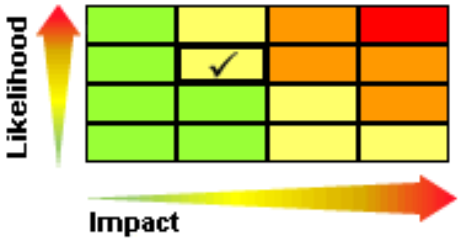
National Severe Weather Warning Service





Chief Forecasters Assessment
In addition to the residual, heavy showers overnight, the daily rise in temperature will once again trigger slow-moving heavy showers and thunderstorms. However, unlike preceding days the area affected is expected to recede southwards and eastwards through the day. Once again, 15-25 mm, and very locally in excess of 30 mm could fall within an hour, bringing the risk of flooding, especially if they occur across urban areas.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **10:00 on Fri, 17th Jun 2016** until **22:00 on Fri, 17th Jun 2016**

Heavy showers are expected to redevelop on Friday, organising into slow-moving bands in places, and leading to some torrential downpours. As on preceding days some locations will miss these downpours, but please be aware of possible localised flooding and disruption to travel where they do occur. Lightning could be an additional hazard.

This is an update to the existing warning which extends the area a little further west across south Wales.
